E-MAIL office@steyr-motors.com

WEBSITE http://www.steyr-motors.com

STEYR MOTORS is the specialist for high performance diesel engines and arose out of the former STEYR-DAIMLER-PUCH group of companies. The company has more than 80 years of experience in the production of diesel engines with outputs of 54 to 280 HP for all types of civilian and military vehicles. The STEYR M1 ("Monoblock") engine range is the fruit of decades of development, manufacturing and market experience.

All peripheral components are of compact, light weight construction, corrosion-resistant and produced in an environmentally-friendly manner. Carefully selected high performance materials and straightforward designs form the basis for the toughness of STEYR Monoblock engines.

STEYR MOTORS developed the world's first hybrid for the marine engine sector in 2008, winning two international Innovation Awards (IBEX, Miami & DAME, Mets Amsterdam) as a result.

FAX +43/ 2247/ 90300 312

WEBSITE <http://www.glock.com>

With the introduction of the GLOCK "Safe Action" pistol at the beginning of the 1980s GLOCK set new international standards in the field of small arms. Never before had it been possible to combine absolute safety, maximum simplicity of operation and speed in a pistol that is additionally distinguished by perfect ergonomics, minimal weight and low investment and maintenance costs.

This is why the FBI, the NYPD, the KFOR and SFOR forces, the German GSG9, the Washington Police Department and the Vatican Police have all chosen the GLOCK "Safe Action" pistol.

"Perfection" stands for our commitment to uncompromising quality, state-of-the-art production methods and total customer orientation. This is guaranteed by GLOCK's status as a privately-owned and independent corporation.

SAIL LABS TECHNOLOGY AG

ADDRESS Mariannengasse 14, 1090 Wien, Austria

PHONE +43/ 1/ 58095 0

FAX +43/ 1/ 58095 581

E-MAIL government@sail-technology.com

WEBSITE <http://www.sail-technology.com>

The Austrian speech technology company specialises in the development of innovative software for analysing naturally spoken language (automatic speech recognition software). A user-defined search and analysis of information is enabled by the fully automatic indexing and transcription of unstructured audio, video and text data.

The underlying technologies for this, such as automatic speech recognition from audio into text, fully automatic indexing, automatic subtitling and many other functions, are developed by the company's R&D department and supplied as complete solutions such as OSINT (Open Source Intelligence) systems, archiving solutions or as single components.
