Elevator Pitch

D-ARIA was founded as the logic consequence out of the strong intention to realize the potentials of I4.0 by developing a short-term-ROI solution.

We found out, that stocktaking by drones is eliminating non- value added processes, which is the target of every organization in terms of continuous improvement. D-ARIA is a "grown-up" with the capabilities to industrialize the solution technically and organizationally.

Start-up Gründerteam

CEO - Maximilian Mrstik - Background in Supply Chain Management Consulting (EFS Consulting)

CTO - Dr. Nicolas Thorstensen - Background in Robotics and Sensor Fusion (iviso)

Stadium des Start-ups

POC accomplished

Prototypes for automatic and manual controlled drones are in place. Revenue stream is generated and continuously growing. Looking for a funding for further R&D and engineering, as well as strategic partners for networking.

USP

Robust Indoor Navigation

No adaption of customers' infrastructure required

Regulatory restrictions have been considered

Financial Auditors and leading ERP-System providers are in the loop

Schweiz Erfahrung

So far not - but we know that in Switzerland yearly stocktaking is mandatory. Further, the restrictions are stricter than in Germany or Austria. Therefore, we assume that Switzerland is a very attractive market for D-ARIA. Apart from that, we have experienced that Swiss companies are open for innovations and eager to explore new solutions.

Erwartungen

We want to present our capabilities and we are pleased for potential customers and investors, to whom we propose live-demos at their locations.
