The company's focus is on the discovery and development of next generation immunotherapies against cancer and infectious diseases using its own proprietary novel interferon-inducing viral vector technology platform. The technology is based on a safe, genetically modified influenza vector (delNS106) that induces a strong immune response and can overcome the immunosuppression created by cancers. Moreover, the vector can express tumor-specific antigens to stimulate specific immunity against different types of cancer, thus opening the door to a promising treatment option that acts on several levels.</p> <p>BlueSky is getting promising data from its clinical trial</p>

		<p>phase 1 and is actively looking for Series A financing and strategic partners in Asia.</p>

pocket, we solve this problem with our soft and natural approach.

SnoreFree is the first smart & scientifically proven therapy against snoring & sleep apnea

Snoring is a major health issue with high human and economic costs. It affects globally 2.5 billion people of all genders and ages. Mostly caused by muscle weakness in the mouth and throat. Our unique oral training is derived from speech therapy and tackles the root cause of snoring: the weak, loose muscles in the throat, making them strong, to keep the airway open during sleep. 80% of our users experience significant improvements in their sleep and life quality, after just a few weeks training. Positive side effects of the SnoreFree therapy are a strengthened immune system, a better articulation and tightened facial muscles. Recently we launched a certificate and full reimbursable medical product inline with the new German Digital Healthcare Act. SnoreFree will be the 1st DiGA (digital health application) available on prescription, and will be fully reimbursed by all statutory health insurances in Germany. We expect our DiGA listing at the BfArM (Federal Office for Drugs and Medical Devices) in Q4/2023.

SnoreFree is looking for seed financing of 1 mil EURO and strategic partners to localize and scale SnoreFree in Hong Kong and China.

VR Coach GmbH

Virtual Reality Therapy is a sought-after tool for clinical psychologists. With virtual reality therapy, specific and social phobias can be effectively treated. These mental disorders can be treated by patients under the supervision of a therapist move through virtual environments using VR headsets and confronting them with the fear stimulus.

Current systems are so expensive that only a few hospitals can afford to buy them. By switching to the company's subscription model and the hardware used, this technology is available to hundreds of thousands of private practices worldwide.

VR Coach is looking for seed financing of EURO 1 – 2.5 mil (min 500k) and strategic partners in Asia.
