

**Visionary  
power.  
Wherever  
you want.**

**Global  
Hydro**

# Advantage Digitalization

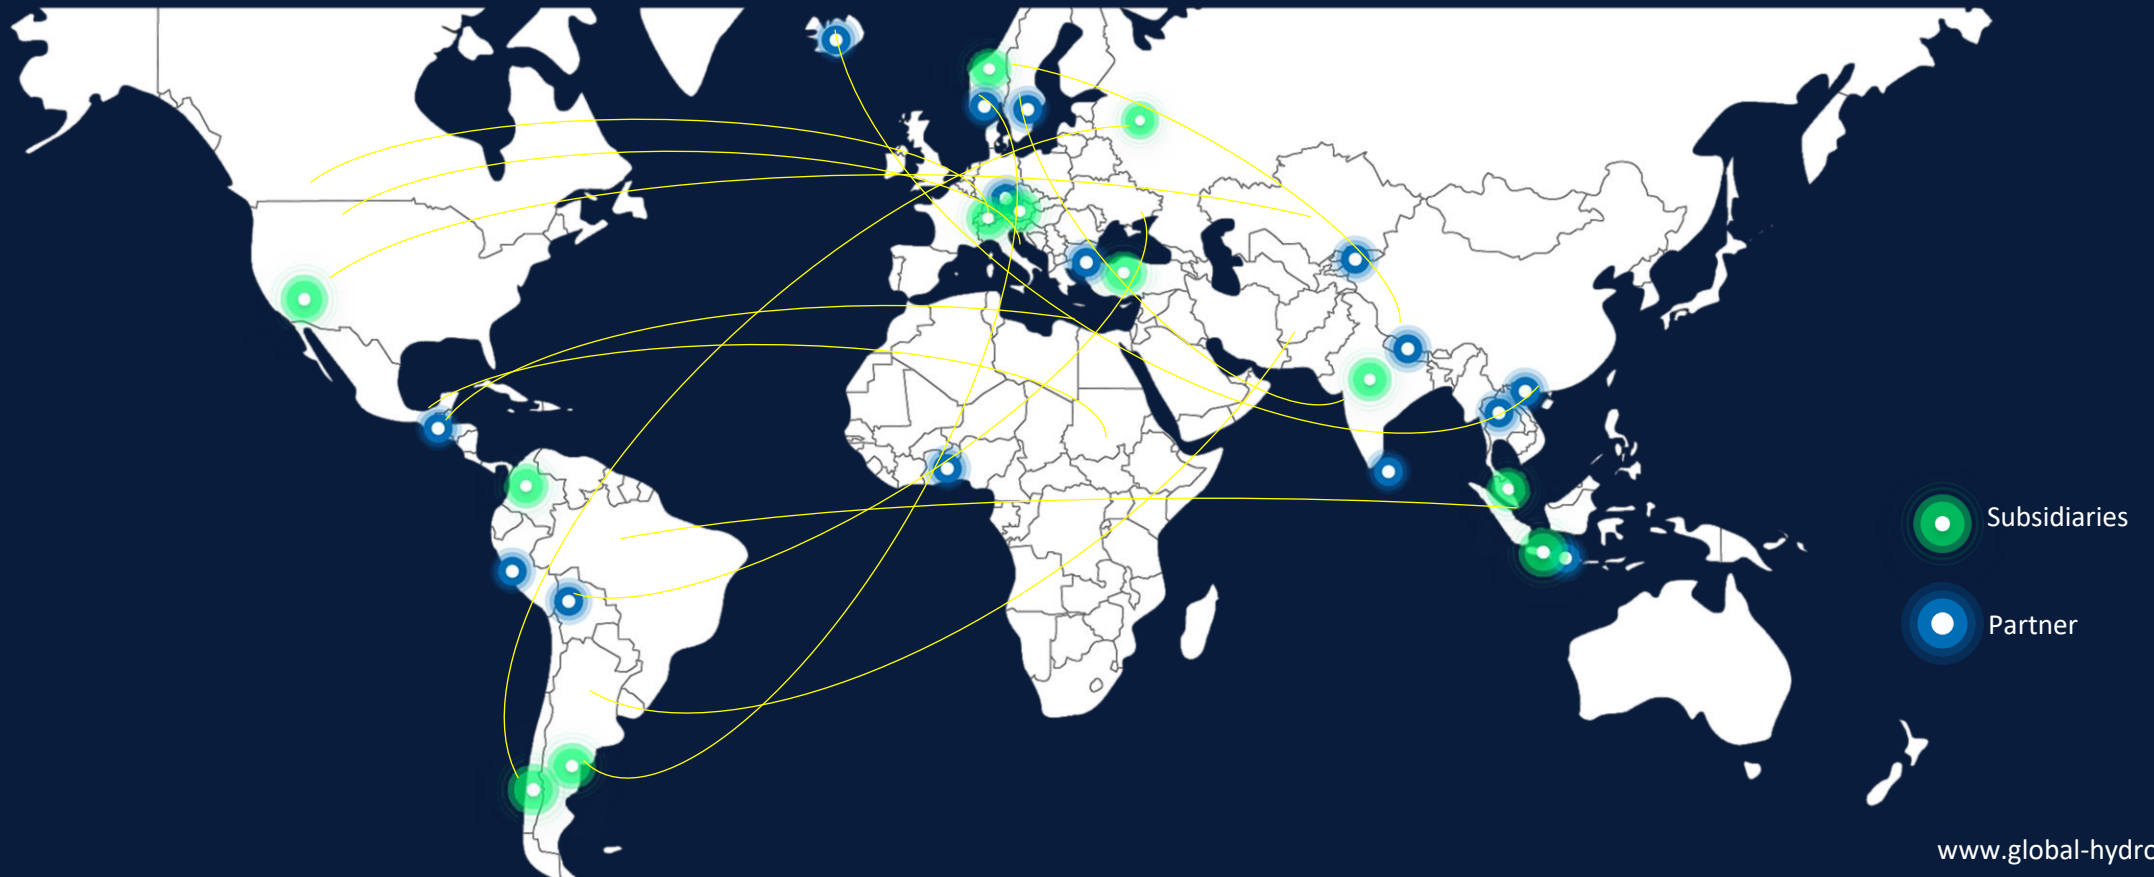

---

# Focus on the customer

International structures for international business based on digital solutions

Digital products and services based on today's technology to ensure a smooth project execution and a high plant availability

# Digitalization meets conservative business

---

The development of digital technologies promises significant impacts in the (energy) industry.

Covid 19 pandemic crises was accelerating the digitalization

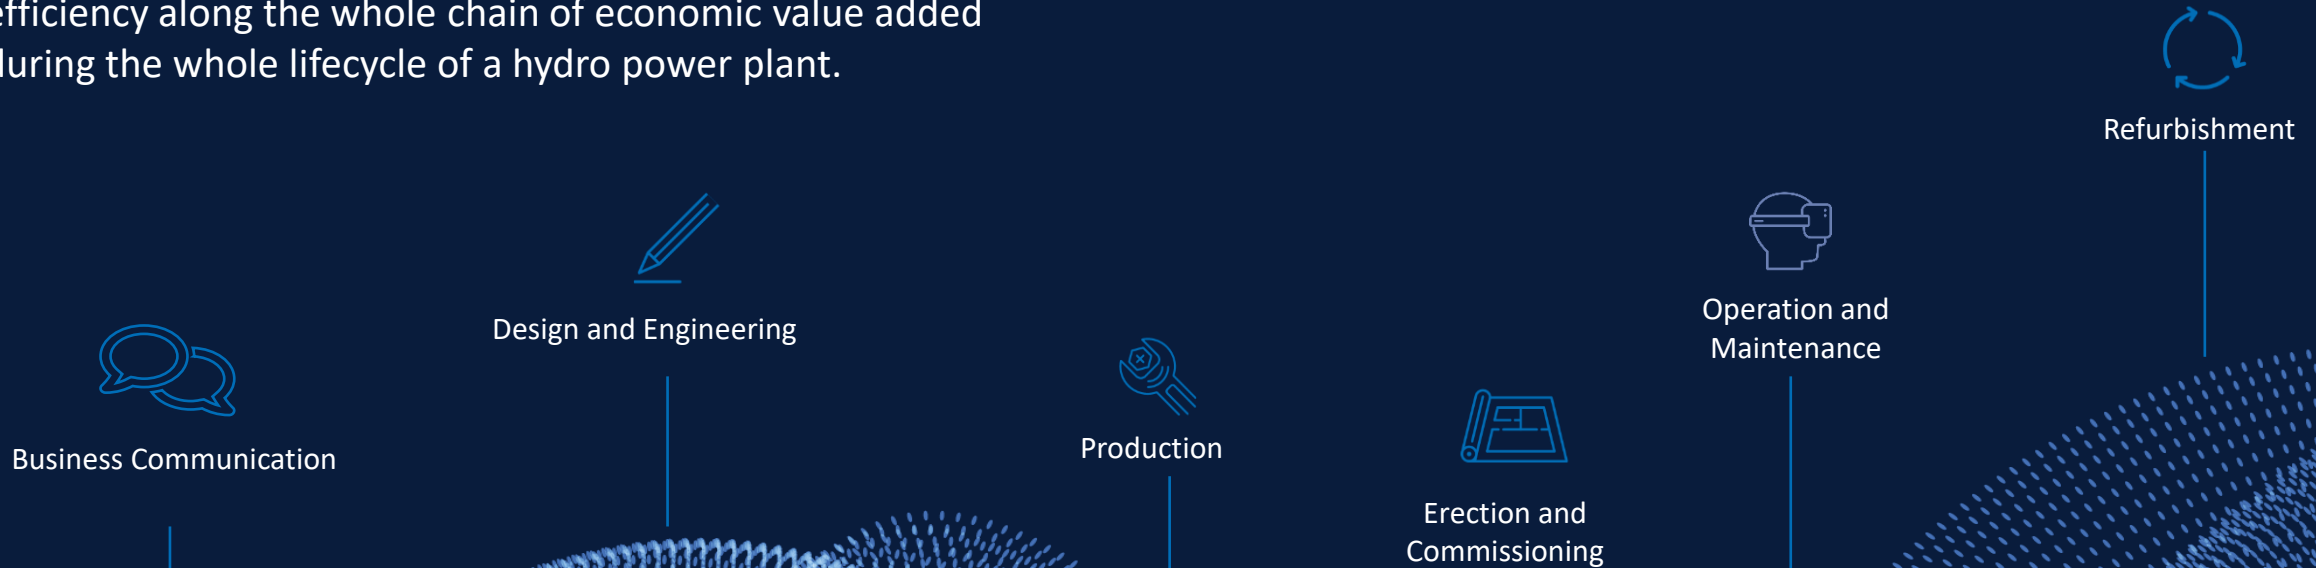

# Digitalization meets conservative business

Digitization is becoming an integral part of the conservative hydro power business

The advantage of **digitalization** is the possible improve of efficiency along the whole chain of economic value added during the whole lifecycle of a hydro power plant.

# Digitalization of communication

## Global Hydro Headquarter

-  Fully digitalized and automated processes
-  Spread knowledge and share information
-  Fully integrated ERP System
-  Fully integrated software tools for the operating departments
-  Virtual Meetings
-  Dual commissioning's
-  Virtual FAT's

## Global Hydro worldwide subsidiaries

-  Digitalized and fully automated processes
-  Receive knowledge and share information
-  Virtual Meetings, commissioning's and FAT's

## Customer

-  Virtual customer platform
-  E-Learning and training for operators
-  Virtual Meetings, commissioning's and FAT's

## Power Plants

-  Dual commissioning's
-  Monitoring and Operating assistance
-  Digital Support Center
-  Fully integrated web shop for wear parts

# Internal digitalization

getting ready for more

# HEROS.

the beating heart of our customer-oriented digitalization

# The future belongs to **HEROS**.

---

## **HEROS 1 & 2**

Simple turbine governor  
(Focus on the basic functions)

## **HEROS 4**

IoT Scada System, HEROS connect  
(Cloud based visualization and operation of  
several powerplant)

## **HEROS 5 (2023)**

Focus on the available DATA stream of the  
powerplant  
Machine Learning, AI  
Fully integrated communication platform

## **HEROS 3**

Powerplant Management System  
(Integration of all relevant systems in one system)

# Keep the overview – HEROS Connect

---

## Poor visibility

Different control systems of different HPPs at multiple locations worldwide

→ One unified and central view consolidates all information to one dashboard

## Limited mobile accessibility

Due to complex remote accessibility or lack of capability to use it on a variety of device types

→ With better mobile accessibility, operators stay up to date on performance and potential issues

## Poor data storage and analysis

Different control system are currently limited in storage and scalability of collected data and analysis

→ Data collection and analysis enables to detect potential to increase the efficiency in the operation and maintenance of hydropower plants

# Keep the overview – HEROS Connect

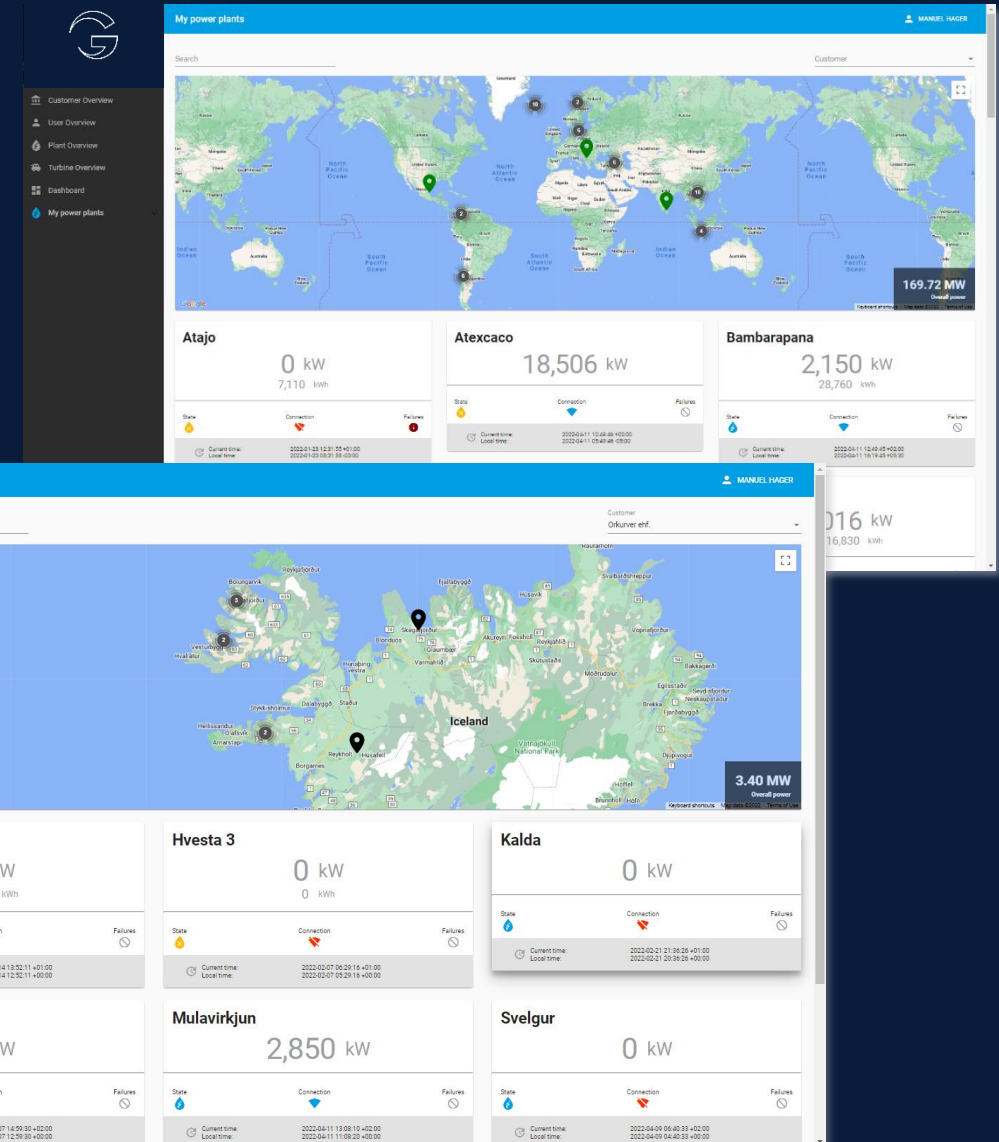

Unified and centralized view

Customer in Island

Taking care of several HPPs

Past: Needed to connect to each HPP separately

Now: One click and overview

# Keep the overview – **HEROS Connect**

---

Unified and centralized view

**HEROS Connect** gives you a unified and centralized view of all your plants, simplifying analyzation and unlocking the potential to detect operational improvements.

---

Enables cross-comparisons between different plants and turbines

---

Integrates any control system, helping you control multiple plants.

---

Provides the same visualization for all plants, simplifying control and analyzation of data.

---

Eliminates the need for multiple power plant operators to establish a costly SCADA system and communication infrastructure

# Keep the overview – **HEROS Connect**

---

Unified and centralized view

**HEROS Connect** allows you to control all connected plants on one platform and offers personalized visualization of many different data on one dashboard

---

Keeps you up-to-date about connectivity, operational and failure status, and powerplant output as well as single turbine output.

---

Allows you customize views to fit to your needs.

---

Displays different current turbine values like openings, winding and bearing temperatures and control modes.

---

Uses advanced evaluation and analysis capabilities to provide comparisons of different kinds of measurements.

# Remote Commissioning

Professional team in  
headquarter and subsidiaries

Local team on site

Cameras  
VR-glasses  
Process  
Digital documentation  
...

Inspection — Dry test — Wet test — Trial operation

# From Remote Commissioning to Dual Commissioning

## Global Hydro Offices

- Lead is always in our commissioning centres
- Higher flexibility and parallel commissioning of more projects
- Improvement of documentation
- Secure same commissioning standards

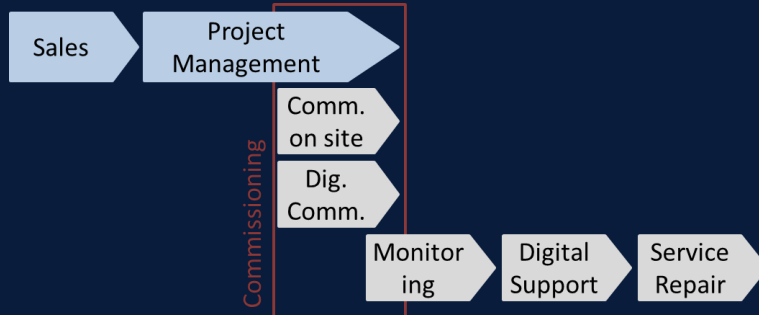

## Powerplant

# From Remote Commissioning to Dual Commissioning

## Global Hydro Offices

- Defined processes with regulation which steps needs to be done in powerplant and which can be done remotely
- Documents archived centrally and retrievable
- Live status/progress overview evaluations and dashboards

## Powerplant

- Increase safety and quality
- Only relevant steps are available
- Approvals for operations - interface to HEROS
- End devices independently in connection with VR/AR

# Digital Trouble Shooting & Support

- Local team or customer can be guided with VR glasses or also with mobile phone/tablets
- Communication, pictures, ... are stored for each case/project on server
- Exchange of data or pictures
- Visualization of additional information on other devices

Data exchange

# Digital Products and Services

## Optimize Production

- Produce power at the right time
- Optimize efficiency

## Reduce Maintenance costs

- Machine Learning
- Powerplant KPI's
- Monitoring expert reports

## Keep an Overview on your plants

- HEROS Connect

Feed in Tariff oriented control

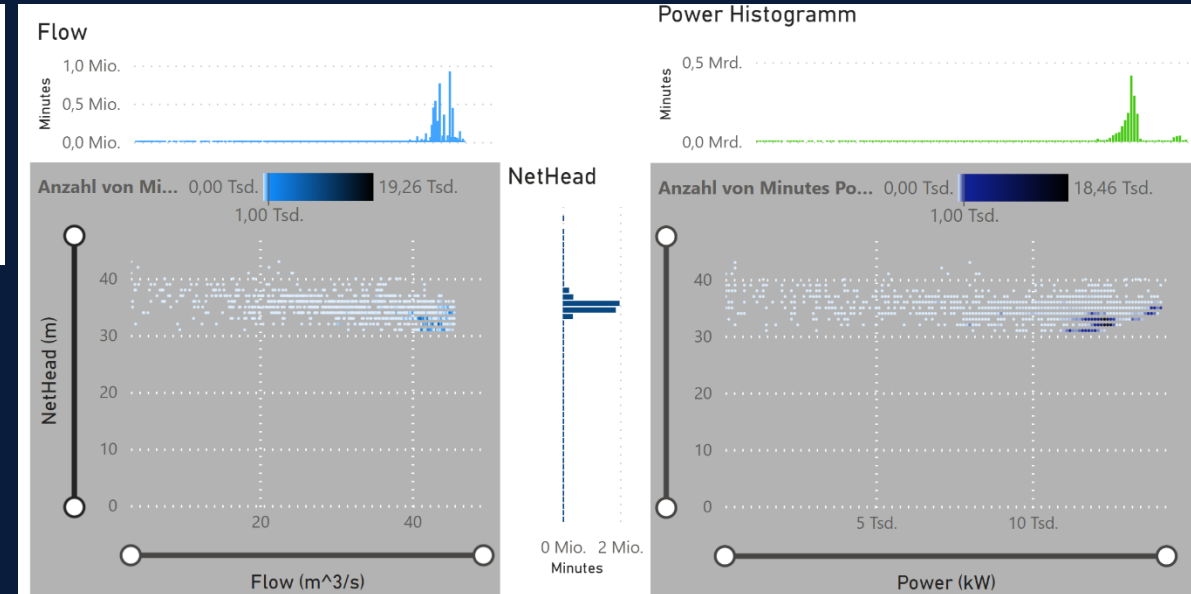

Efficiency optimized Water split up

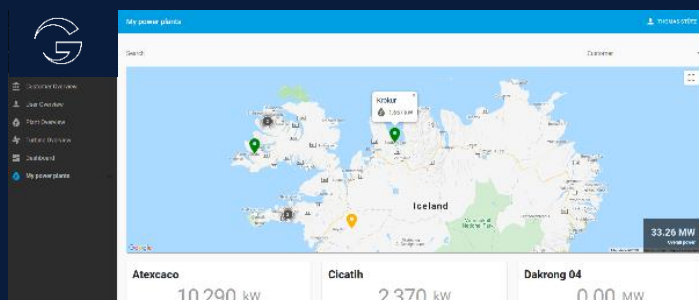

Powerplant KPI's

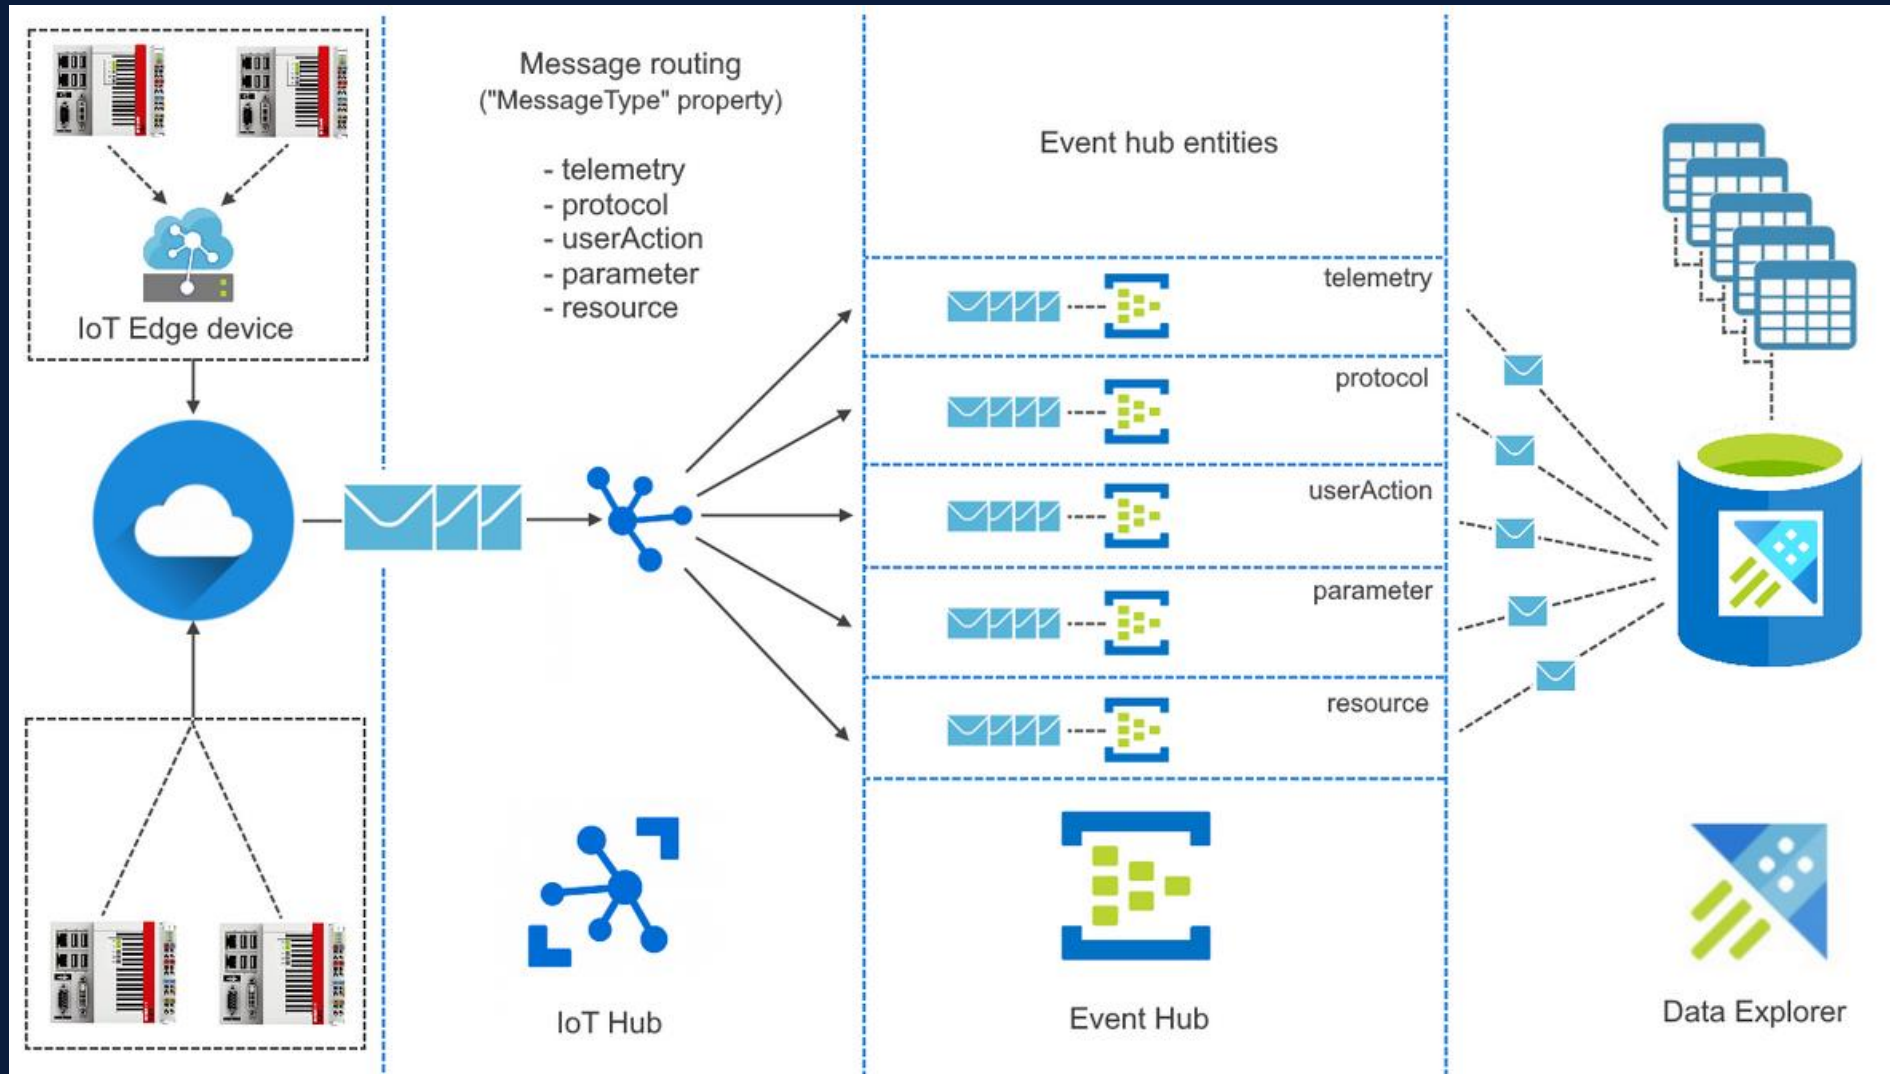

Predictive Maintenance

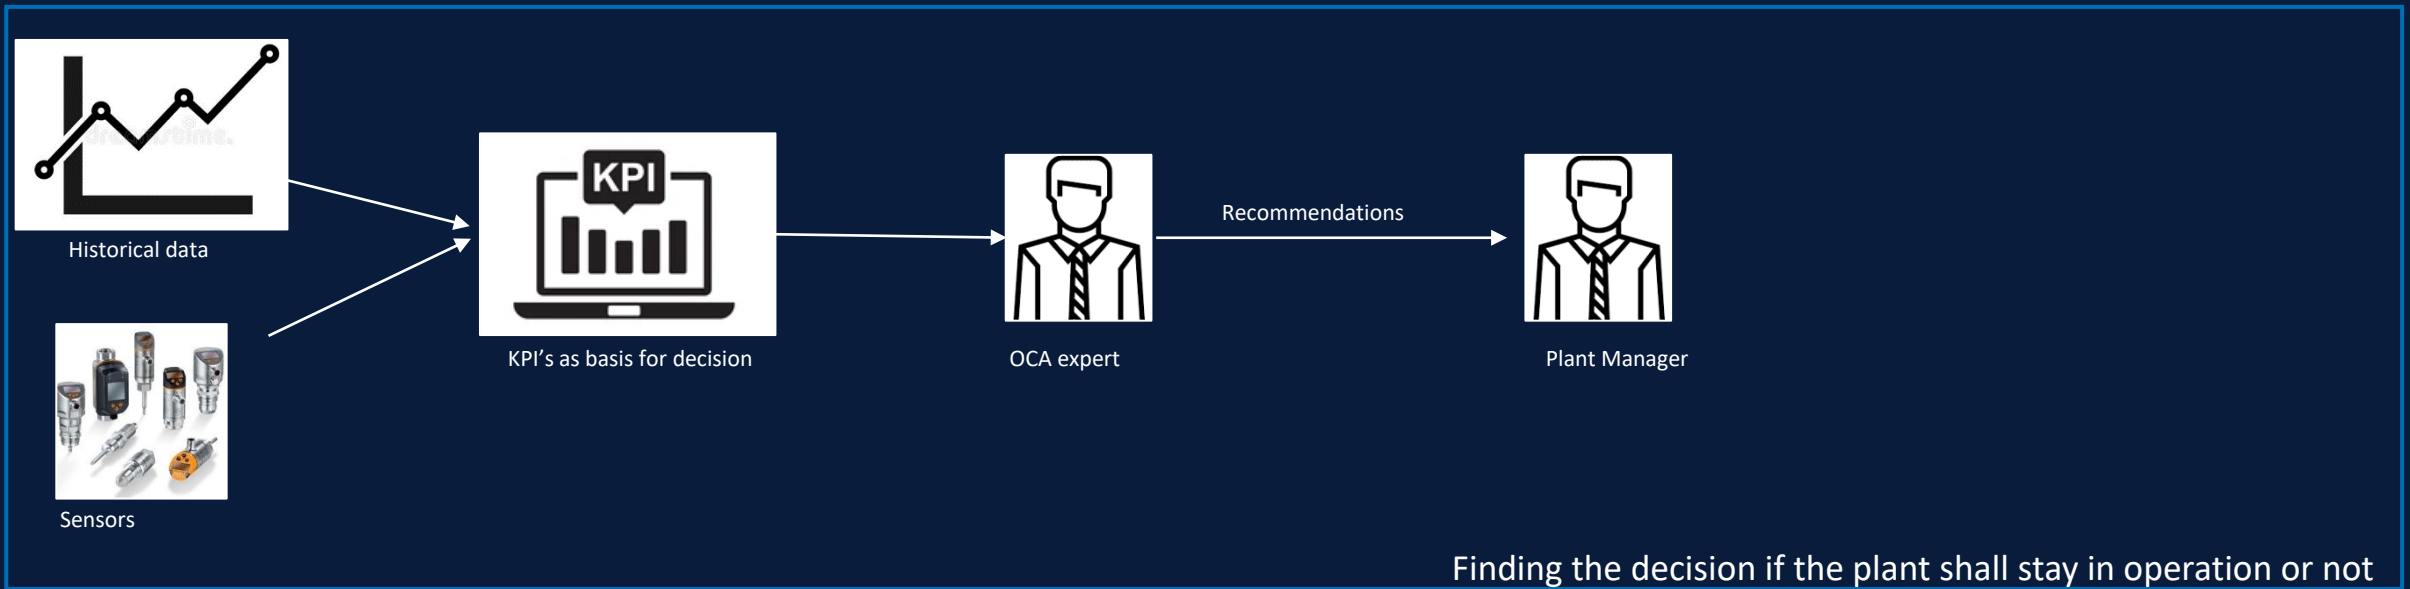

Expert report and advises

IoT Scada system HEROS Connect

# Machine Learning Use Case – Detect Abrasion

# Machine Learning Use Case – Adaptive Temperature monitoring

Detection of wear;  
changing values?

React on problems

Detect problems before they occur
