NANO-AEROSOLS FOR INDOOR AIR

Nano-aerosols at waterfalls relieve asthma. **AQVENA's** devices (Atomizer & Vortex) therefore produce the same nano-aerosols that are produced by waterfalls. Only these nano-aerosols, which are up to 200 times smaller than those on the market, can evenly and deeply humidify the lungs and permanently relieve asthma.

These nano-aerosols strengthen our immune system and cleanse the air of viruses and bacteria in a natural way.

REVOLUTIONIZING HEALTHCARE

Interoperability with FHIR Expertise

© Black Tusk GmbH

Black Tusk develops customized and quality-assured interoperability solutions for the healthcare and social sectors. We draw on many years of experience in the areas of development, testing, standardisation and quality management.

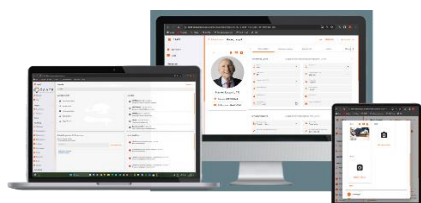

Black Tusk is actively shaping digitization in healthcare by understanding the use of semantic interoperability as an integral part of our eHealth applications and solutions, thereby indirectly creating the conditions for data-based research, clinical decision-making systems and ultimately more patient centricity.

**THE COMPLETE DIGITAL SOLUTION
in the care and support sector**

CAATS HealthTech Startup that digitizes and connects the entire value chain of HealthCare Services.

CAATS (Care As A Trusted Service) is a platform that addresses the problems, needs and expectations of those involved in the HealthCare system and together develops digital solutions for efficient and high-quality care and support in everyday life.

BRIGHT MINDS FOR THE DIGITAL TRANSFORMATION in the healthcare sector

The eHealth Institute at FH JOANNEUM Graz, which is part of the Department of Applied Computer Science, focuses on the health and social sector within applied computer science.

In addition to a general computer science education, the focus is therefore on in-depth teaching content in health informatics and health management.

The central research topic of the institute is the digital transformation of the healthcare system.

Topics are: Quality of Life (Outcome), Disruptive Technologies (Wearables), Machine Learning, Clinical Decision Support, Digital Health Promotion

**AUTOMATED RISK ASSESSMENT FOR
HOSPITALS**

© Deposit Photos/SergeyNivens

Predicting Health, which emerged from Steiermärkische Krankenanstaltengesellschaft (KAGes), is a highly innovative start-up company revolutionising the healthcare sector.

Predicting Health's precise forecasting tools use AI and machine learning to anticipate potential health complications.

In close collaboration with medical professionals, the company has developed the Personal Risk Tool to assess risks in everyday clinical practice automatically.

Predicting Health thus increases patient safety and relieves the burden on hospital staff.

The company's vision is to shape the future of preventive healthcare actively.

**TREETOP SMART GUIDELINES &
TREETOP SMART WORKFLOWS**

At Treetop Medical, doctors, software developers, and academic partners, such as the Medical University of Vienna, collaborate to support doctors with digital solutions for patient care.

At the heart of all those involved is the conviction that holistic modelling of medical knowledge and the use of interoperable standards are essential for the sustainable digitalisation of medicine.

This conviction is reflected in the innovative architecture of Treetop Medical solutions for efficient knowledge management and, in the future, for digital modelling of clinical processes.
