System7 Rail

System7 develops, produces and distributes railway maintenance machinery. In 2015, System7 has launched a completely new type of fully hydraulic tamping drive. This revolutionary invention replaced the more than 70-year-old principle of generating the compaction vibration by means of a rotating eccentric axle. The new System7 tamping units, which have meanwhile proven themselves in many applications, avoid costs, maintenance expenses and machine failures. At the same time, the durability and quality of the tamping is demonstrably increased.
