**GEOMETRIC
HARDWOOD
FLOORING**

Geometric hardwood flooring

We have created brand new geometric collection for those who are looking for something new in the world of flooring. Geometric shapes will make the wooden floor fresh and unusual. Geometry is an emerging trend in Europe. We see more and more interest in new forms both at exhibitions and in already completed orders.

The geometric collection become possible by borrowing experience from related industries: high-precision CNC machines were previously used specifically in furniture production. There are now two such machines at our factory in Austria.

The main feature is a dimensional accuracy, so each wooden element fits perfectly with the others. It allows us to produce complex and curved shapes that will be perfectly installed!

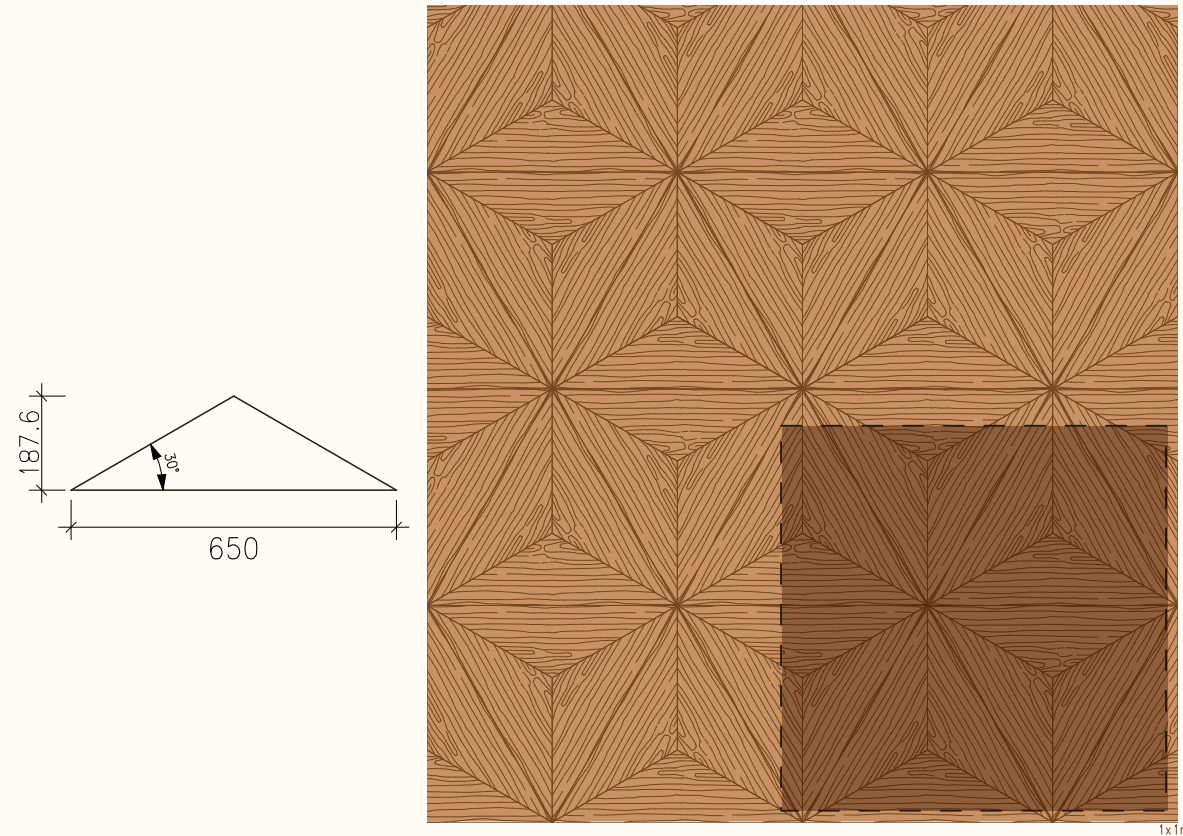

+ 15 new forms!

But we do not limit the imagination of the designer and can make any shape in your size

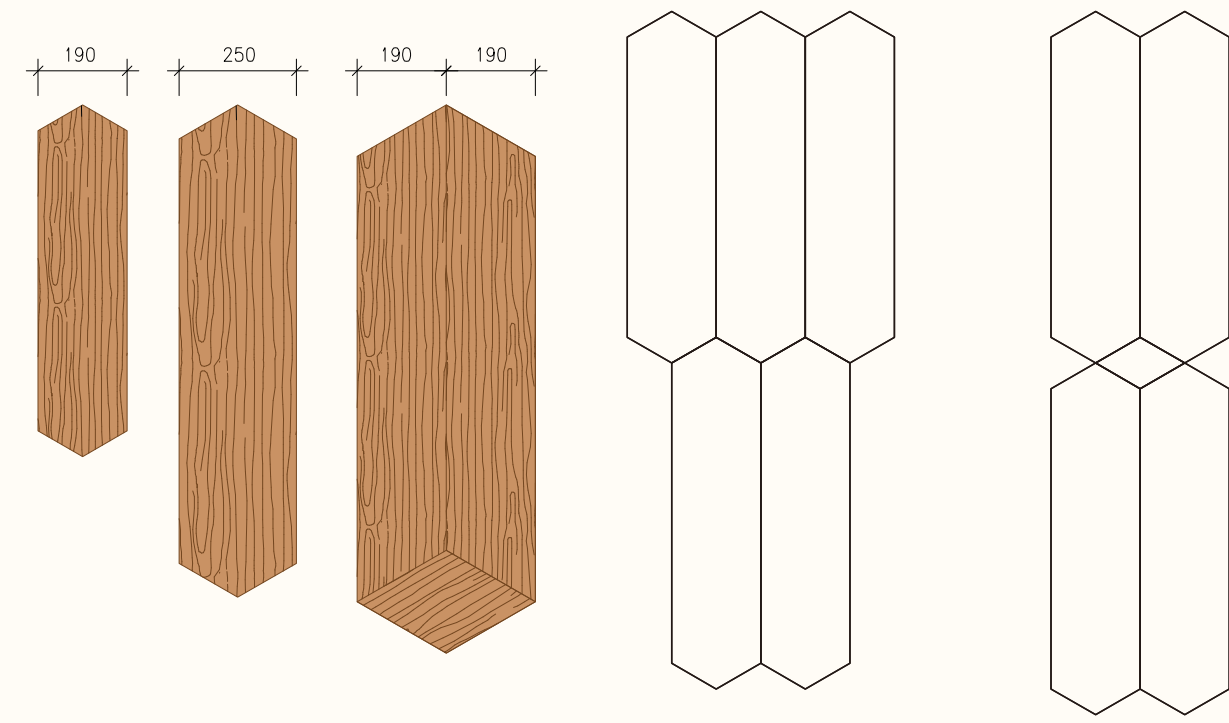

- + All Austriawood surfaces could be applied
- + Various wood species and custom colors
- + Elements have the same thickness and could be easily combined as well with our planks, chevron, herringbone and Module formats
