The function behind Berolan Products is to produce air voids, for example in plasters or mortar, which makes them considerably easier to process and reduces the formation of cracks.

Berolan improves the wettability of dry building material with water and supplements the dispersing effect of the cellulose.

The air-entraining also increase the yields of the mortar and reduces the risk of cracks caused by shrinking or tension. The small and stable air voids are characteristic of Berolan, particularly in gypsum-based plastering mortars.

An additional effect is a recognisable improvement of the open time.

Berolan公司产品的作用是产生孔隙，例如上石膏或灰浆，可以明显带来加工便利，并且减少裂纹的产生。

Berolan公司用水改进干建筑材料的湿度，补充纤维材料的分散效果。

孔隙的产生增加了砂浆的使用效率，也降低了由于收缩或张力而产生裂纹的风险，Berolan产品的孔隙尺寸小、稳定性好，特别是适应于石膏灰泥墙面。

随之带来的另外效果是能明显地缩短施工时间。

MPA has developed a new kind of insulation system, ThermoWhite®, in which a newly developed binder made of natural mineral raw materials, recycled polystyrene and water is pumped into a building and then levelled.

ThermoWhite® forms a solid layer which can be walked on within a very short period of time and, as there are no joins, means above all that thermal and acoustic bridges can be avoided. The vapour barrier can now be laid directly on top of the insulating material, then the floor heating with the screed. The advantage of ThermoWhite® is not only the considerable improvement in heat and impact noise insulation, but also the significantly faster drying times.

Areas of application:

- floor and attics
- vaulting
- flat and pitched roofs
- backfill for pools

MPA已经开发出了一种崭新的隔热系统ThermoWhite®, 一种由天然矿物原材料制备而成的新型粘合剂, 与可再生聚苯乙烯和水被一同灌入建筑中之后整平。

ThermoWhite®可以在一个非常短的时间内形成固体层, 由于不产生接触, 所以各种热量与噪音都可被有效阻隔。现在防潮层可以直接被平铺在隔热材料上, 并在砂浆层上进行地热供暖。ThermoWhite®的优点不仅仅在于改善了隔热与隔绝噪音的效果, 还在于其非常短的干燥时间。

应用领域包括:

- 地板与阁楼
- 圆形拱顶
- 平面或斜坡屋顶
- 水池回填用料

Naporo is the only company worldwide which produces a facade insulating material (for composite thermal insulation systems) out of hemp.

The decisive advantage over conventional products like EPS and mineral wool lies in the technical properties of the hemp fibre insulation boards. The hemp facade is permeable and more resistant than all other facade insulating materials and offers the highest level of soundproofing.

Produced from local raw materials, the insulation boards bond more CO<sub>2</sub> than is used in the production. In 40 to 50 years they can be reused. This concept has received several awards, most recently the Austrian Climate Protection Award in 2013.

The outstanding life cycle of all Naporo products and the positive CO<sub>2</sub> effect of our raw materials mean that we are the technological leader on the hemp insulation market.

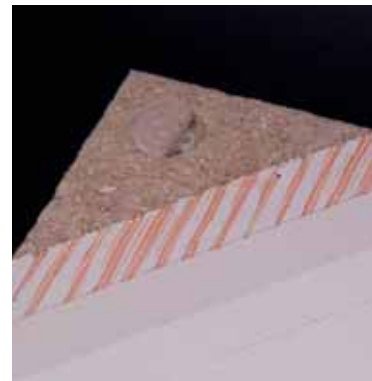

Naporo公司是全球范围内仅有的使用麻为原料生产外墙保温材料（用作复合保温系统）的企业。

区别于类似EPS和矿物棉之类传统的产品，其最大的特点在于麻纤维保温板的技术性能。麻纤维外立面的透水性和稳定性都比其他外墙保温要好，同时还提供了更高一级的隔音效果。

产品取自本地天然的原材料，保温板可以固定二氧化碳气体，固定的量远高于生产过程中所排放出的量。在之后的40至50年内都可以再次利用，产品的这一创新理念多次获奖，最近一次获得的奖项是2013年度奥地利气候保护大奖。

Naporo公司全线产品杰出的寿命周期，原材料积极的二氧化碳对策都体现出了企业在麻纤维保温材料领域的技术领导地位。

The energy department is researching innovative solutions for reducing emissions in the built environment – from the small scale building system and structure up to large scale urban development.

The team boasts specialist know-how in the development and optimisation of thermal components for heating and climate control, particularly in the area of heat pump technology and solar thermal energy.

At building level, design concepts for sustainable buildings based on renewable energy sources and innovative control strategies are created.

In an urban context, these individual concepts are combined to form single sustainable energy concepts which can be used to realise the vision of the „Smart City“.

奥地利国家技术研究院能源部正在开发减少建筑环境排放的先进方案—从小规模的建筑物到大规模的都市化规划。

我们的团队在如何开发、优化供暖和气候调节系统方面有相当丰富的专业知识，特别擅长热泵技术与太阳能使用。

从建筑学上讲，可持续建筑的设计理念是基于使用可再生能源和建立创新的控制策略。

在都市环境中，这些不同的概念会被结合在一起，形成一个可持续的能源概念，最终用以实现“智能化城市”的美好愿景。

The core business of alpS, the largest non-university research centre in the west of Austria, is to bring science into business applications and local practice.

We offer highly accurate fundamentals for the planning of energy/land use in municipal communities and regions. Energy master plans, GIS-based modelling for energy demands at building level, as well as the analysis of biomass, solar and geothermal renewable energy potentials enable the communities to develop their energy autonomously.

Future scenarios provide the basis for informed decisions and pave the way for the security of supply at a regional level, independent of fossil fuels.

alpS是奥地利西部最大的非大学性质的研究中心，核心业务是将最新的科研成果引入商业应用和当地建设。

我们为城市社区建设提供高精度水平的能源和土地使用计划。能源总体规划，建筑层面的GIS能源需求模型以及生物质、太阳能、地热能等可再生能源的潜能分析综合考量有助于提高社区能源的自主性。

未来情景设想能够为决策提供基础，帮助在社区层面上摆脱化石燃料，实现能源安全供应。
